

This Carbon Neutral Action Report for the period January 1st, 2017 to December 31st, 2017 summarizes our emissions profile, the total offsets to reach net-zero emissions, the actions we have taken in 2017 to reduce our greenhouse gas emissions and our plans to continue reducing emissions in 2018 and beyond. By June 30, 2018 Selkirk College's final Carbon Neutral Action Report will be posted to our website at selkirk.ca.

#### **OVERVIEW**

#### **ACTIONS TAKEN IN 2017**

Selkirk College is committed to reducing its ecological footprint and creating a culture of sustainability among all members of the campus community. During 2017, the College continued to take action towards reducing its carbon emissions with the goal of achieving carbon neutrality.

Renovations at the Silver King Campus in Nelson continued throughout this year, which included the substantial completion of the North and South Trades building renovations. These upgrades incorporated new energy efficient LED lighting, complete with occupancy control and daylight harvesting where applicable. The renovations also upgraded ventilation systems, including variable speed exhaust, heat recovery and advanced control systems. The system commissioning will continue to be addressed in order to achieve the greatest possible energy savings.

Measures identified within the energy audit of Nelson's Tenth Street Campus continued to be carried out. This included the installation of demand controlled ventilation in the Mary Hall kitchen.

Outdoor lighting on the Selkirk College Castlegar Campus was significantly upgraded. More than 100 LED luminaires were installed, along with a computerized system allowing each light to be fully programmable. This project also included the installation of four solar powered luminaires. The external lighting at the Applied Research and Innovation Centre in Castlegar was also upgraded to LED.

An energy audit was conducted for the Kootenay School of the Arts, located in Nelson. This audit has shown where changes and upgrades could increase this building's energy efficiency.

Selkirk hosted a successful Sweater Day event in early 2017. The heat on campus was turned down and students and staff were encouraged to wear a sweater to show their support and commitment to energy conservation. Actions of this event resulted in nearly a 25% reduction in energy use for that one day. The event showed that small changes can have big impacts. Sweater Day will become an annual Selkirk event.

Energy conservation procedures are being included within the College's Environmental Sustainability Policy. These procedures address heating and cooling target temperatures, as well as the use of electronics and personal appliances on campus. The College recognizes that addressing energy consumption is of utmost importance when working towards a sustainable future. Participation in the energy conservation guidelines will be strongly encouraged, as Selkirk students, staff and faculty are instrumental in achieving College energy conservation targets.

Figure 1 Selkirk students showed their support for energy conservation during Sweater Day.

# OVERALL INITIATIVES WHICH TIE IN WITH GHG EMISSION REDUCTIONS

### WASTE REDUCTION AND DIVERSION

Selkirk College continues to address campus waste by seeking ways to reduce consumption and increase the diversion rate.

In the fall of 2017, the Sustainability Committee and Environment Club conducted a waste audit of the Castlegar Campus cafeteria and Pit (common area). The results from the audit showed opportunities for improvements within the waste and recycling streams. In response to these results, the Environment Club provided environmental education outreach, aiming to reduce the use of disposable coffee cups and cafeteria to-go containers. The College will continue to seek ways to change consumer habits.

Selkirk is now a Call2Recycle Collection Partner. During the first 3 months of the program, approximately 30 kilograms of batteries were shipped for proper recycling.

Castlegar Campus continues to run a compost program using an onsite Earth Tub composting system. Participation in this program increased during the 2017 fall semester. Green organics bins on campus and in student housing are used to collect food scraps. The Castlegar Campus also offers a home composting dropoff program, accepting organic material from students and staff homes weekly.

Figure 2 Members of the Selkirk Environment Club and Sustainability Committee held a campus waste audit.

#### **TRANSPORTATION**

Selkirk runs a carpool program, encouraging students and staff to travel to and from campus together to reduce the number of vehicles on the road. The regional Kootenay Rideshare program is also promoted. College staff and faculty are encouraged to use video conferencing and teleconferencing whenever feasible to reduce our emissions associated with travel. Selkirk also hosts an annual Bike to School week.

Figure 3 Students and staff are encouraged to carpool to campus to assist in reducing our carbon footprint.

# PLANS TO CONTINUE REDUCING EMISSIONS IN 2018 AND BEYOND

Selkirk College will continue to work towards carbon neutrality throughout 2018. In our region, the 2017 heating season was more severe than the preceding year, with nearly a 20% increase in the number of heating degree days, increasing heating energy demand for our facilities. We expect to see increased energy savings at the Silver King campus as renovations continue to be completed during 2018. The College will carry out further recommendations from the campus energy audits, and through education and outreach efforts, will strive to increase participation in campus sustainability initiatives in order to lower the College's carbon footprint.

## Projects will include:

- Implementation of building control strategies to Kootenay School of the Arts Campus.
- Optimization of building heating/air handling systems for recently renovated Trades Shops at the Silver King Campus.
- Feasibility assessment for adding an electric vehicle to the College fleet.
- Improvements to campus recycling station units, signage and education.
- Incorporating lessons of sustainability into courses college-wide.

### **EMISSIONS AND OFFSETS SUMMARY:**

# Selkirk College GHG Emissions and Offsets for 2017 (tCO2e)

## GHG Emissions created in Calendar Year 2017

Total Emissions	1195	
Total Offsets	1194	
Adjustments to GHG Emissions Reported in Previous Years		
Total Emissions	75	
Total Offsets	75	
Grand Total Offsets for the 2017 Reporting Year (tC02e)	1,269	

## REQUIREMENT OF OFFSETS

11

In accordance with the requirements of the Greenhouse Gas Reduction Targets Act and Carbon Neutral Government Regulation, Selkirk College (the Organization) is responsible for arranging for the retirement of the offsets obligation reported above for the 2017 calendar year, together with any adjustments reported for past calendar years. The Organization hereby

agrees that, in exchange for the Ministry of Environment and Climate Change Strategy ensuring that these offsets are retired on the Organization's behalf, the Organization will pay within 30 days, the associated invoice to be issued by the Ministry in an amount equal to \$25 per tonne of offsets retired on its behalf plus GST.
